Projects

- **Yojanadoot.in – Maharashtra Government Collaboration**
Developed a comprehensive website in partnership with a state government to improve public access to government programs. This project required close collaboration with government stakeholders to design an accessible platform that disseminates program information to the public.
- **Kautilya Bharat Foundation & Kautilya Bharat Strategy Websites**
Designed and developed two websites tailored to the unique branding and objectives of Kautilya Bharat Foundation and Kautilya Bharat Strategy.
- **Kautilya Bharat - Employee Tracking & Attendance Android App**
Created an Android application to streamline employee tracking and attendance for efficient workforce management.
- **Obstacle Avoiding Robot Car Using An Arduino**
An Obstacle Avoidance Robot is an intelligent robot, which can automatically sense and overcome obstacles on its path. It contains a Arduino to process the data, and Ultrasonic sensors to detect the obstacles on its path. Obstacle avoidance is one of the most important aspects of mobile robotics.
- **Obstacle Detection Using LIDAR 360 Degree For Military Use**
This is an advanced system that can be used by the defence department to track and identify the enemy's live location. military lidar system eliminates the huge antenna and uses a very small size infrared laser transmitter setup that tracks objects with very low energy consumptions

Certifications

- Completed Professional Training from Jspiders Thane Mumbai.
- Completed Internship from C-Tech Electronics Vashi, New Mumbai.
